

CIVIL ENGINEERING TECHNICIAN -CONSTRUCTION

Program Outline

| р |
|---|
| |
| |
| |
| |

Description

This two-year program prepares graduate technicians to work with engineers and construction project managers as part of a team constructing roads, bridges, sewers, water mains, and other infrastructure. Technicians develop information for cost estimation, perform materials testing, and assist in the administration of projects in the field. Teamwork and project-based learning are emphasized.

This program is common with the first four semesters of the Civil Technology program and graduates may choose to continue into the third year of that program.

Career Opportunities

Graduates find work in the private sector assisting quantity surveyors (estimators), purchasers, site supervisors or project managers, drafters or detailers, using the latest in CAD technology. They may also find employment as assistants in engineering or construction offices. In the public sector, they may find employment in many government agencies or as site inspectors.

Program Learning Outcomes

The graduate has reliably demonstrated the ability to:

- collect and appropriately apply civil engineering and construction data from existing graphics, reports, and other documents;
- contribute to the collection, processing, and interpretation of technical data related to civil engineering and construction projects;
- communicate information effectively and accurately by interpreting, translating, and producing civil engineering and construction documents;
- complete all work in compliance with the rights and conditions of contractual obligations; applicable law, standards, bylaws, and codes; and the accepted principles and practices of civil engineering and construction;
- monitor the quality and quantity of work for civil engineering and construction projects;
- contribute to designing, planning, inspecting, and constructing civil engineering and construction projects;
- contribute to the evaluation of equipment, materials, and methods employed in the implementation and completion of civil engineering and construction projects;
- use electronic technology to support civil engineering and construction projects;
- apply the principles of mathematics and science to analyze and solve technical problems related to civil engineering and construction projects;
- maintain civil engineering and construction project records, logs, and inventories;
- contribute to the assessment of the political, social, and environmental impacts of civil engineering and construction projects;
- recognize the interdependence of the architectural, structural, mechanical, and electrical disciplines relating to civil engineering and construction projects;
- facilitate communication among project stakeholders involved in the design and implementation of civil engineering and construction projects;
- develop and use personal and professional strategies and plans to enhance professional growth and competence;
- assist in the preparation of accurate estimates of time, cost, quality and quantity; tenders; and bids for civil engineering and construction projects;
- work in compliance with the theory and the accepted principles and practices of the civil engineering and construction industries;
- contribute to the human resource management of civil engineering and construction projects.

Practical Experience:

Co-operative Education is a mandatory component of all Co-op programs at Georgian College; it has been designed as a process by which students integrate their academic education with work experience related to their program of study. This integration affects much more than simply earning a salary, including the adjustment to the work environment and the development of professionalism. It also reinforces skills and theory learned during academic semesters, develops professional contacts, job knowledge and career path, improves human relations and communication skills and promotes personal maturity and financial independence. Students are requested to register, attend and participate in their scheduled co-operative education classes. These classes are scheduled for all first year students and are expected to be completed in order to proceed successfully to their first co-op work experience. To ensure students are eligible to proceed onto any co-op work experience students should refer to Promotional Status and Eligibility for Co-op as outlined in the College Calendar. Co-op policies and procedures can be located on our website: www.georgianc.on.ca/careers/for-students/

Georgian College follows the Co-operative Education guidelines set out by the Canadian Association for Co-operative Education (CAFCE) and Education at Work Ontario (EWO) by supporting the learning outcomes designed for the program specific graduate profile and curriculum as set out by the Ministry of Training, Colleges and Universities.

The Program Progression:

Fall Intake - Barrie

| Sem | 1 | I | Sem 2 | Ι | Work Term | L | Sem 3 | Sem 4 |
|------|---|---|--------|---|-----------|---|-------|--------|
| | | | | | | | | |
| Fall | | | Winter | | Summer | | Fall | Winter |
| 2014 | | | 2015 | | 2015 | | 2015 | 2016 |

Admission Requirements:

You must meet ONE of the following requirements to be eligible for admission to these programs:

Secondary school applicants:

- OSS Curriculum: OSSD or equivalent with Grade 12 English (C) or (U) (ENG 4C, ENG 4U); plus any Grade 12 College Mathematics (MAP 4C or MCT 4C), or any Grade 12 U University Mathematics. Also recommended: Grade 12 College or Grade 11 or 12 University Physics (SPH4C, SPH4U, SPH3U) or Grade 12 College or Grade 11 or 12 University Chemistry (SCH4C, SCH4U, SCH3U); Grade 11 or 12 College or University Technological Design (TDJ3M, TDJ4M); Grade 11 or 12 College Manufacturing Engineering Technology (TMJ3C, TMJ4C)

Non-Secondary school applicants (19 years or older):

- Any credit Communication course and most credit mathematics courses taken at Georgian College

- College preparatory programs including those taken at Georgian College: Technology Foundation and Technology Fundamentals*

 Equivalent courses in English and mathematics taken through secondary school or Independent Learning Centres (at the general, advanced, college or university level)
Academic and Career Entrance Certificate (ACE) program with communications and business, apprentice or technical mathematics*

- Mature student testing in English and mathematics that meets the minimum standards for admission (available through most testing services)*

- Ontario High School Equivalency Certificate (GED)

- English, Literature or Communication credit courses and most mathematics credit courses from accredited colleges/universities

Home school applicants:

- Applicants can write the mature student testing in English and mathematics that meets the minimum standards for admission (available through testing services)*

* available from Georgian College. For a complete listing please contact the Office of the Registrar.

Non-secondary school applicants who are 19 years of age or over by the first day of classes, and who lack the academic entrance qualifications, may be considered for entrance to an appropriate post-secondary diploma or certificate program as mature applicants. Mature applicants must meet all program specific prerequisites including all selection criteria; equivalencies are stated above. Applicants who are unsure whether they meet admission requirements should contact the Office of the Registrar. In addition, those applying as mature students and having no documentation of Grade 12 education must supply, if required, proof of age, such as a copy of an official birth certificate or driver's licence. Refer to Section 2.5 and 2.6 of the Academic Calendar for further details.

Credit transfer and course exemptions:

Applicants who have taken courses from a recognized and accredited post-secondary institution and/or have relevant life/learning experience may be eligible for credit transfer/course exemptions. Courses/experience must match at least 80% of the learning outcomes of a Georgian College course with a minimum grade of 60% or C achieved in previous coursework; some program exceptions apply (see program outline). For further information please visit the Credit Transfer Centre website: georgiancollege.ca/admissions/credit-transfer/

Graduation Requirements:

19 Mandatory Courses

2 Communications Courses

- 3 General Education Courses
- 1 Co-op Work Term

Graduation Eligibility:

To graduate from this program, the passing weighted average for promotion through each semester, from year to year and to graduate is 60%. Additionally, a student must attain a minimum of 50% or a letter grade of P (Pass) or S (Satisfactory) in each course in each semester.

Mandatory Courses

Communications Courses

To be selected at time of registration from the College list, as determined by testing.

General Education Courses To be selected from College list

Co-op Work Term COOP1028 Civil Engineering Work Term 1

Course Descriptions:

CIVL1000 Quantity Surveying: Construction Plans and Measurements 42.0 Hours This course introduces the student blue print reading and measurement techniques. Skills in estimating techniques and industry practices are applied to a small project. Students examine infrastructure projects and the computerized tools used to prepare competitive estimates in the bid tender process. Cost analysis, profit requirements and specific performance issues are discussed.

CIVL2000 Engineering Standards and Practices 42.0 Hours

This course introduces the student to Standards from organizations including but not limited to CSA, (Canadian Standards Association), ASTM, (American Society for Testing and Materials), AASHTO, (American Association of State Highway Transportation Officials), and SCC, (Standards Council of Canada), as well as the professional practice requirements found in the industry today.

COMP1056 Civil Engineering Graphics 42.0 Hours

Students develop CAD skills and produce drawings using the standards of the construction industry. The course addresses drawing production in design offices. Its purpose is to convey the process followed at each stage of development between project inception and completion, and explores the interrelationship between the project owner, professionals, regulatory authorities and contractors.

COMP1057 CAD / Civil Construction 42.0 Hours

Continuing the development of students' skill with CAD software by introducing larger scale projects, this course emphasizes the professional quality and standards for drawings in the civil/construction field. The necessity for document control, cross referencing of details, and compliance with formal standards and field practices is key. P- COMP1056 Civil Engineering Graphics

CONS1003 Construction Practices 42.0 Hours

An introductory study of the methods, and to a lesser extent materials, commonly used in Civil Engineering construction. Students address various equipment and their applications in the field. Efficiency and effectiveness are emphasized along with effective logistical management of a site. This course includes a significant Health & Safety component.

CONS1004 Construction Practices and Design: Materials and Material Testing 42.0 Hours

This course introduces concrete, asphalt, aggregates, and other construction materials and their applications in civil engineering projects. Students are introduced to engineering standards and the standard test methods associated with these common building materials. Mixed designs for concrete and asphalt are explored and tested. CONS2000 Construction Practices: Methods 42.0 Hours

A study of materials and methods commonly used or seen in construction associated with architecture and infrastructure development are the basis for this course. Also included are common calculations and contract specifications for various types of projects.

CONS2001 Construction Practices: Building Systems 42.0 Hours This course consists of advanced construction theory topics for architecture and design projects. Emphasis is placed on refinement of building design, materials and construction details. The course integrates architectural drawing standards, acceptable construction detailing principles, building code requirements and building systems. P- CONS2000 Construction Practices:Methods

CONS2002 Site Development and Drainage 42.0 Hours

This course focuses on the design and installation of municipal services. The main topics are piping materials, sewer and water main appurtenances, and loads (both structural and hydraulic) on storm and sanitary drainage systems.

CONS2003 Construction Practices and Design: Municipal and Provincial Codes and Standards 42.0 Hours

This course introduces the student to practical standards from organizations such as the MTO, (Ministry of Transportation, Ontario), OPS, (Ontario Provincial Standards), and municipal requirements, which explore the application of these standards in design and specification writing.

CONS2004 Construction Practices and Design: Highways 42.0 Hours This course examines the classification of highways with an emphasis on function. Studies include the relationship of spirals, curves, vertical curves, and super elevation. Students design a highway by conducting appropriate planning and using accepted geometric features and their interrelationships including alignment, intersections, and drainage. Legislation regarding the jurisdiction of roads in Ontario is examined.

ECON2004 Engineering Economy 42.0 Hours

By understanding the financial constraints and opportunities of the industry, technologists contribute to decision making for capital projects and equipment. The course covers the concepts and techniques for the economic justification of engineering proposals and the economic benefits of capital expenditures.

ENVR1000 Environmental Science and Sustainability 42.0 Hours

This course focuses on ecological principles, population dynamics and energy resources in order to assess their impact on the environment. The major types of pollution are examined and their effects on the various components of the ecosphere analyzed. Strategies for pollution control and the conservation of the Earth's resources are examined in the context of economic considerations and sustainable development.

MATH1018 Introduction to Technical Mathematics 42.0 Hours

This course provides a foundation in mathematics in engineering technology and related programs. Students will develop skill in mathematical thinking and problem solving, and appropriately apply technology in the solution of engineering related problems using algebra, geometry, right angle trigonometry, trigonometric functions of any angle, systems of linear equations, and exponential and logarithmic functions. Additional time to strengthen and reinforce mathematical competencies will be made available to those students who require it.

MATH1019 Technical Mathematics 42.0 Hours

This course extends the mathematics ideas taught in Introduction to Technical Mathematics through advanced mathematics problems needed for mechanical engineering programs. Mathematical reasoning and problem solving will be reinforced through problems in an engineering context. Mathematics concepts reinforced and extended are algebra, systems of linear equations, vectors and oblique triangles, graphs of trigonometric functions, and complex numbers.

P- MATH1018 Introduction to Technical Mathematics

MENG2003 Statics 42.0 Hours

This course is an introduction to the equilibrium of externally applied forces and internally developed reaction forces as applied to engineering structures and machines.

MENG2007 Strength of Materials 42.0 Hours

This course is designed to familiarize the student with some basic concepts of strength of materials, particularly direct stress and strain, bending and torsional stresses. P- MENG2003 Statics or P- EML4113 Statics or P- MENG2011 Statics and Dynamics or P- EML4237 Statics And Dynamics

MGMT2002 Project Management 42.0 Hours

This course introduces the fundamental principles necessary for successful management of projects. Project planning, management and control techniques will be discussed and the application of computers in project management will be studied.

SURV1001 Civil / Construction Surveying 42.0 Hours

This is an introductory course to plane surveying as related to the construction industry. Emphasis is placed on obtaining field skills in linear measurement and the operation of levels, transits, theodolites and total stations. Elevations, horizontal, vertical, and spiral curves are explored.

Course Description Legend

P = Prerequisite; C = Concurrent prerequisite; CO= Corequisite

Information contained in College documents respecting programs is correct at the time of publication. Academic content of programs and courses is revised on an ongoing basis to ensure relevance to changing educational objectives and employment market needs. The college reserves the right to add or delete programs, options, courses, timetables or campus locations subject to sufficient enrolment, and the availability of courses.
